

## VDE Bavaria Future Forum

### WE took part

After many postponements, the time had finally come. After a long break from Corona, the VDE Future Forum finally took place in May 2022 and we from eiSos were right in the middle of it. It was to revolve entirely around the topic of the energy transition. There were presentations and discussions about opportunities and challenges for Bavaria with VDE partners such as Würth Elektronik eiSos, Webasto, Wölfel N-Energie, Tennet, Cluster Leistungselektronik or Energie Region, but also with young professionals from electrical engineering and information technology.

The active part was taken over by our esteemed colleague Dr Thomas Brander. In the Tec Talk, he spoke about the technologies of tomorrow to achieve the energy transition and made it clear that this requires courage and innovation. The Tec Talk was moderated by product manager Martin Sittner.

The Sonnenwagen team from RWTH Aachen also took part with a pitch about their project and how we at eiSos could support them. It was really exciting to experience how closely the team worked with the technology partnerships around Marion Wagner.

During the breaks, a trade fair area was set up where we were also represented. So the 100 participants could inform themselves about the partner companies of the VDE over the two days of the event with a snack and a drink.

Further information can be found here: [download-programme-fr-sa-data.pdf](#) (vde.com).

Next year, we are again planning to take part in a future novel, which we will in all probability be happy to participate in again.
